

ABSTRACT OF THE DISCLOSURE

The present invention relates to novel methods and kits for monitoring the therapeutic inactivating capacity of a subject. Moreover, the present invention further relates to methods and kits for determining and/or monitoring a therapeutic protocol for a subject afflicted with auto antibodies specific for a natural substance, wherein these auto antibodies develop as a result of therapeutic administration of the natural substance or an analog thereof. These methods and kits can be used, for example, to initiate, terminate, or adjust the level of administration of any of a variety of therapeutic agents.
